

April 16, 2003

Dear Mr. Ke,

Attached please find the results of your search request for application #09/710,927. I searched Dialog's foreign patent files, technical databases, product announcement files and general files; along with the EIC's library.

Please let me know if you have any questions.

Regards,

Geoffrey St. Leger

## Lasso Selections

To make a lasso, or freehand selection, activate the Lasso tool, and place your mouse cursor at the point where you'd like the selection to begin. Now left-click and drag, and as you move your cursor you'll notice a line forming your shape. After you have the desired selected area and you're back at the starting point, release your mouse button and you'll see the marquee designating your selection. If you release the mouse button before you get back to your starting point, the Lasso tool will automatically close the ends of your selection with a straight line between the two points. You can add, subtract, and intersect lasso selections using the same methods you learned with the shape tools.

... traffic and overload as well.  
The first key to success in supporting intranet traffic is to understand where it comes from. A typical intranet application **draws** about 15 percent of its **content** from a traditional data center repository, and the remaining 85 percent is "supporting content" that comes from a series of Web ser- vers. For example...

...the user what to do in a variety of support situations. The table content comes from a data center, and the hyperlinks come from specialized **Web pages** that explain support procedures and policies, which might be extracted from procedure manuals.

One big mistake people make in designing intranet applications is poor placement...

...ABSTRACT: Wizard which takes the user step by step through the creation of a home page. However, the Wizard is not helpful for setting up a **Web site** because the user has to choose between between three arbitrary selections for setting up the site. QuickSite uses a non-Mac style, Windows-standard Project window to organize sites by using non-indented plus and minus symbols to designate pages and **enclosed items**. The arrangement makes it hard for a user to locate files in the site hierarchy. The user has to employ cumbersome menu commands to rearrange...

... a striking resemblance to a spreadsheet. Within this window, you can see all the pages, images, downloadable files, and other items that make up your **Web site**. Items are listed hierarchically, but not using the Finder-style expand/collapse triangles and indentations Mac users have come to expect. Instead, QuickSite uses nonindented, Windows-standard plus and minus symbols to designate pages and **enclosed items**. This arrangement makes it very hard to tell where a file is located in the site hierarchy.

Unconventional Annoyances  
QuickSite's interface problems go well...

TEXT:

The FullShot image utility from Inbit is now in its sixth version, and it's one of the handiest programs you can keep on your hard drive. With it you can take snapshots of a complete screen or separate objects on the screen such as dialog boxes, menus, and command buttons, or you can **draw around an area** and capture that **part** of the screen. Then you can print or save the captured images, resize them, frame them, change the color or convert to black-and-white, flip or rotate them, erase **parts**, or **merge** two or more images into one. FullShot supports 18 image formats and can capture in modes from 16 colors (4-bit) to 16.8 million colors (24-bit). Use the images in manuals, training handouts, presentations, marketing materials, or for **Web pages**. And now the FullShot V6 Enterprise Edition has included the Image 123 program. The program lets you build an image database with point-and-click functions. It supports six indexes for searching, has built-in backup procedures, and allows browsing in thumbnail mode. The Fas tBuild tool can help build a large image database automatically, making it an invaluable add-on for graphic designers, **Web page** builders, training specialists, technical writers, and anyone whose list of image files is proliferating out of control.

#### ABSTRACT

PROBLEM TO BE SOLVED: To review images in an electronic album device while comprehending the relative locations of a plurality of images in the device.

SOLUTION: An electronic album device 100 which displays images is provided with a storage section 160 which stores images, a first display section 152 and a second display section 154 which display images, a frame section which has a first frame that surrounds the section 152 and a second frame that surrounds the section 154, an image switching section 130 which is mounted on a hinge mechanism provided between the first and the second frames, has an opening section that presents the images displayed on the sections 152 and 154 and is capable of manually turning pages and a display control section 120 which selects and reads images from the section 160 to display them at least on one of the sections 152 and 154 based on the switching of images by the section 130.

#### ABSTRACT

PROBLEM TO BE SOLVED: To make operation such as moving, addition and deletion of a picture easier in an electronic album.

SOLUTION: In a picture pocket cell type page for displaying the specific

number of pictures in a fixed position by a fixed size on a display screen, at the time of selecting an operation object, a selection situation display cursor of a frame shape which **surrounds** the object **picture** is displayed and, at the time of moving and addition, a cursor of a vertical line shape is displayed at a position of a moved and added party. In a picture position-size-free type **page** which can display more than one picture at an arbitrary position by an arbitrary size on the display screen, the cursor of a shape different from the above is displayed.

#### ABSTRACT

PURPOSE: To improve the availability of a memory area closing together the space parts, etc. produced in the latter half of a **text line** to hold **continuously data** by a buffer and showing the line divisions by the specific codes set between lines on the buffer or a means like a table showing the position of each line and the data length.

CONSTITUTION: A processor 1 stores the print data covering the head of each line through the end of the valid data excluding the blanks, etc. of the rear part in a print buffer 10 with **continuous lines** in the print preprocessing of **data** on a **page** of a text. At the same time, the information of a prescribed style showing the divisions of each data between data of the buffer 10 is set to a division display means 11 in parallel with storage of the print data. Thus the processor 1 executes a line data output part 12 when the preprocessed text held by the buffer 10 is printed. The part 12 refers to the division information of the means 11 to produce the print data out of the buffer 10 for each line and sends successively the print data to a printer 4 for printing.

Abstract (Basic): GB 2370739 A

NOVELTY - A remote control unit includes arrow keys that are pressed for modifying an image by spotlighting a region of the image relative to its surroundings using a trackable spotlight.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Multimedia network terminal;
- (2) Display generation method; and
- (3) Display generation program.

USE - In multimedia network terminal (claimed) such as internet-enabled digital television set-top box, PC, game console, web pad, PDA and mobile station such as telephone, for use in navigating a web page .

ADVANTAGE - Enables a user to navigate a web page easily.

DESCRIPTION OF DRAWING(S) - The figure shows a set-top box and a television set.

NOVELTY - An input module (14) inputs the information regarding user's state or user biological information based on which a converter (12) converts the display aspect of a document in order to give emphasis to a part of the document. A document display module (16) displays the converted document.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

(1) Document display aspect conversion method; and

(2) Recorded medium storing display aspect conversion program.

USE - For converting aspects of documents such as web **pages** to be displayed on a computer monitor.

ADVANTAGE - Gives emphasis to certain **parts** of document by **highlighting**, based on user input **information**.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the display aspect converter. (Drawing includes non-English language text).

Abstract (Basic): WO 200144915 A2

NOVELTY - A portion of electronic document is displayed to the user as an immersive reading **page** mimicking a printed paper **page**. Enhanced functionality is transparently associated with elements of reading **page**. User access is provided to enhanced functionality in response to user selecting element of **page**.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for computer readable medium stored with software program for implementing electronic document display.

USE - For displaying electronic documents as well as library books through Internet, for allowing the users to access to **content** interactive features such as **highlighting** annotation, drawing or looking-up definitions or synonyms of words in the document.

ADVANTAGE - Enhanced functionality is made available to the user without the addition of traditional user interface features and the book is presented in a manner that encourages an immersive reading experience.

DESCRIPTION OF DRAWING(S) - The figure shows the immersive reading **page** in the form of book **pages**.

Abstract (Basic): EP 226018 A

The text-graphic editing system includes a mixed data editor which produces a compound document having text and graphic objects positioned on the same **page**. The editor manipulates text and graphic object sets. The text object text is provided with a flow attribute which causes text to be set against the boundary of the graphic object set. In response to input signals a definition is stored of an irregularly shaped window. The boundaries of lines of text which intersect with the window are determined.

Text is placed into available text space including the lines which intersect with the window and those which do not intersect.

ADVANTAGE - Fills all 'white' space on **page**.

#### ABSTRACT

PROBLEM TO BE SOLVED: To provide more detailed information on a property displaying a **surrounding** map, a locational environment, a commutable range for a user when displaying information on a rental house by retrieving the property corresponding to a desired condition of the user by using a real estate retrieving system.

SOLUTION: This area information display system has a map file database 3 for storing image data for indicating a map of respective areas, a property information database 4 for storing the information on the rental house and a server 1 for storing a questionnaire result database 5 for storing questionnaire result information on a rental house tenant and an object property tenant of a **surrounding area**, and displaying respective **information** on a Web **page**. When the user inputs the desired condition from a terminal 2 making access to the server 1, information 4 on the rental house corresponding to the desired condition is retrieved, and is displayed as a summary. When selecting a specific property from the summary, **image data** for indicating the **surrounding** map of an object property is displayed, and then, information on the object property and the questionnaire result information on the rental house tenant and the object property tenant of the **surrounding area** are displayed on an **image** screen.

#### ABSTRACT

PROBLEM TO BE SOLVED: To provide information of higher convenience by limiting an **area** in a user's immediate **surroundings** for user's convenience of using the Internet.

SOLUTION: At this **site**, the living area of the user is limited first for Internet retrieval. For example, when a person who lives at Meguro ward, Tokyo, Japan opens this **site**, a map of Meguro ward is displayed first. Then when an item coherent to life is clicked, a corresponding homepage is displayed and the contents of services are confirmed. Further, when a place is clicked, stores or places where the services are provided are displayed on the map of Meguro ward.

#### ABSTRACT

PROBLEM TO BE SOLVED: To provide a system which selects and extracts only necessary information from various information sources and efficiently displays it on a limited screen.

SOLUTION: This system comprises many information sources 101, an individual features filter 102, a time filter 103, an area filter 104, an extraction information database 105, a distributing means 106, and a user's portable telephone 107 with a browser function. The **encircled part** 100 is an operation **site** that operates this system and manages the three filters, extraction information database, and distributing means.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a multimedia information retrieving graphic user interface device capable of easily and quickly retrieving required multimedia information recorded in a portable information recording medium by easy operation.

SOLUTION: The graphic user interface for retrieving required multimedia picture information from plural multimedia information recorded in plural different information recording media and reproducing the retrieved information is provided with a compression means for compressing plural recorded multimedia image information, a **page** image information generation means for generating **page** image information by collecting the prescribed number of compressed multimedia image information, a display means for displaying the **page** image information, a selecting operation means for selecting the required multimedia image information from the displayed **page** image information, an information recording medium display element for visualizing the information recording medium on a display screen, a storage area display element for visualizing the storage area of the information recording medium on the display screen, and a window frame display **element** for **surrounding** the head of the **page** **image** information displayed by the display means by using a window frame.

ABSTRACT

PROBLEM TO BE SOLVED: To prepare patterns at the corner parts of ruled lines plotted around a rectangle in a document so as to equally and smoothly link them to the pattern of a side.

SOLUTION: Pattern information stored in a pattern information storage part 9 by a pattern information acquiring part 8 and rectangle information stored in a rectangle information storage part 11 by a rectangular area acquiring **part** 10 and secured for a **surrounded** article by an operator are corrected by a pattern information correcting part 12 so that the patterns at four corner parts of ruled lines to be plotted can be equally and smoothly linked with the patterns of the sides. The area respectively clipping four corner parts to be plotted on diagonal lines is calculated from the corrected rectangle information by a clip area calculating part 13 and stored in the rectangle information storage part 11. A display part 14 displays the desired ruled lines in the designated area on an editing **page** from the rectangle information including pattern and clip information provided from the pattern information storage part 9 and the rectangle

information storage part 11.

Abstract (Basic): KR 2002022213 A

NOVELTY - A method for producing a CD(Compact Disk) wedding album is provided to let a customer select a desired background of a wedding album and conveniently carry the album.

DETAILED DESCRIPTION - A production method of a CD wedding album comprises the steps of a user driving a CD in a CD-ROM(Read Only Memory) drive of a client, the client automatically reading an automatic running program stored in the CD, the client automatically connecting to a manger server by the automatic running program, the manager server transmitting an initial menu screen frame to the client and displaying an initial menu screen on the display of the client, the user selecting a wedding album producing **site** and inputting information needed for album production(441), the user selecting samples of **pictures** of respective themes and **surroundings** (445), the user inputting the number of selected samples(447), the user selecting a sample of a wedding album card(449), the manager server storing the data inputted by the user in a database, and producing a wedding album based of the data stored in the database.

Abstract (Basic): TW 462013 A

NOVELTY - The present invention is a control method for displaying different text formats in text files. The method discloses a data structure that can record different text formats. When different display operations (such as **text highlight** and **page scrolling**) are carried out on text contents of different text formats, all the related messages required for the display operations can be captured from the data structure. Such data structure for recording text formats is applicable on any text file containing more than one written languages (e.g. Chinese-English bilingual documents) and can save storage resources. Even when any change of the text contents or the display location of a text file is made, the record contents of the data structure can promptly be changed again as bases for the display operation control of the text file.

Abstract (Basic): WO 200122328 A1

NOVELTY - A web page is constructed and conveyed to a client side browser in response to a client-side browser reference to load the web page. A request received by a host server from the client-side browser in response to interaction with the activated image included in the web page, is forwarded to a prescribed third party for fulfillment. The third party is charged for forwarding the request.

USE - For e-commerce.

ADVANTAGE - Generates revenues from transformed content in response

to interactions of user with content. Tracks both mouse movements and mouse activity at client-side of global network to gather data on interests and user-responses to particular elements in web **page** . Harnesses existing static content as new platform for electronic commerce transactions. Makes static **content** active and **highlights** active **areas** . Facilitates electronic commerce by allowing content providers to provide value-added functionality to viewers without being burdened by handling electronic commerce transactions or merchandise.

DESCRIPTION OF DRAWING(S) - The figure illustrates a process flow for defining an interactive image for a web **page** .

Abstract (Basic): WO 9855914 A

NOVELTY - Means for data qualification in pre-collected documents,  
in particular from sites connected to a communication network.  
DETAILED DESCRIPTION - Consultation of the documents is by accessing  
them as if they were a book of pages, where each document represents  
a page. Data or information can be highlighted within each  
page of the document being consulted and contained in a book, in order  
to generate from the highlighted data, access tools such as an  
index summary or synopsis, to help in future accessing of the book  
contents. By highlighting of data or information it is included  
in a summary or index. Such summaries can then be reorganised on a  
chronological basis or in a tree-type structure based on the internet  
URLs at which the documents were found.

USE - The invention is of particular use in off-line consultation  
of documents collected from the World Wide Web.

ADVANTAGE - Access to data or information within a collection of  
documents is greatly facilitated. DESCRIPTION OF DRAWING(S) -  
Visualization example of a document displayed in book format. (PG,PD)  
left and right pages; (RL) book spine; (DG,DD) left and right active  
documents; (O11,O12) collection of tabs displayed on right and left

pages respectively; (OS) summary tab; (O1) index tab; (MP) mark page tab.

JP 3150604	B2	5		G09B-029/00	Previous Publ. patent JP 9237040

Abstract (Basic): JP 9237040 A

The production system makes use of an image scanner (6) to input and an outline map (1) of an area, such as farmland, residential section to a computer file. The input outline map information is stored in a memory (8) of one computer.

The **area enclosed** by the outline map is recognised automatically. Multiple vector information in it are stored separately. An attribute information corresponding to each area is established separately and are preserved.

ADVANTAGE - Enables simplification of outline map input information. Eases preservation of attribution information.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 7262207	A	13	G06F-017/30	

Abstract (Basic): JP 7262207 A

The method involves reading a document using an OCR. A data write-in processor provides the **page** number, length of image data, horizontal number of dots and address linked for each **page**. The information is appended to the image and stored. A **page** of the **image data** displayed (8) is **highlighted** as small domain feature from external input. The feature forms the basis of the link to the image data and is made available on a screen table. The **page** number and co-ordinates of the frame are displayed. The reference processing is carried out by a data reader (9), a domain frame processor (10) and a link image data reader (11). The content of the data link is selected from recording medium for data displayed.

The domain frame processor locates the point information established on the image data corresponding to the contents of the data link. The small domain frame data is read. Small domain frames are viewed in vertical order on the image data. The image reader searches the image data for the data link using the point information. The content of the data link is altered using the located image database. Filing is carried out by displaying the image data as a vertical file.

ADVANTAGE - Eliminates need for database. Fast filing. Operable by unskilled PC operator. Accesses image data through graphic links. Permits use of character unavailable on computer. CDROM filing. Protect copyright by degrading print quality.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a Web page part integrating and  
processing method which enables an end user side to reconstruct a Web  
page, etc.

SOLUTION: This method extracts tag information specifying an independent-  
possible part which is included in the data of a desired Web page 201,  
segmented from the Web page and written so as to be able to be processed  
independently of the other parts of the Web page about the Web page  
acquired from a desired Web server. When it is detected that a user  
designates the independent-possible part included in the Web page on  
the basis of the extracted tag information, the method generates a page  
part including the contents of the independent-possible part designated  
by the user (212) stores the generated page part (222) and generates a  
new Web page including an independent-possible part corresponding to  
a plurality of page parts generated from each of a plurality of Web  
pages acquired from one or a plurality of Web servers (223 and 225).

ABSTRACT

PROBLEM TO BE SOLVED: To easily change design of an HTML page to be  
generated without having help from a programmer by a user and a WEB

designer.

SOLUTION: For all HTML pages to constitute a site, their types and generating method are instructed to a program, they are **combined**, the design of the HTML **page** to be generated is defined, **pieces** of data such as merchandise are regularly extracted from plural data bases 7, 8, the data is embedded in the HTML page based on a template of the defined design and the HTML page is created.

#### ABSTRACT

PROBLEM TO BE SOLVED: To reuse an object on an existing **web** page by extracting the object on the existing **web** page and freely generating a new **web** page based on the object with a free layout.

SOLUTION: A **web** generation device is constituted of a **web page** generation **part** 1 for extracting an object from a plurality of **web** pages and generating a new **web** page with a free layout, a repository management **part** 2 for storing constitution information of the generated **web** page and updating the sealed object, and a **web page** execution **part** 3 which actually generates a **web** page from constitution information and the object, stored in the repository management **part**. The constitutions of the extracted object and the generated **web** page are stored in the repository management **part** and the **web page** is dynamically generated by using them at the time of request of a user. Thus, the latest object can always be referred to on the generated **merging web page**.

KR 2002089582	A		1 G06F-017/00	

Abstract (Basic): KR 2002089582 A

NOVELTY - A system for creating an electronic catalog using a parameter is provided to enable a user to input the information of a wanting product to the parameter on a **web** .

DETAILED DESCRIPTION - A CMS(Catalog Management System) engine comprises a starting part for transmitting a product ID to a CMS DB, a forming **part** for forming a **page** to set up a situation matching to the situation data by searching the situation data matching to the product ID from the CMS DB, and a **combining part** for creating an encoded parameter by analyzing and **combining** the product ID, the **data** matching to the situation data, the data for an analysis and an encoding algorithm, and for transmitting the encoded parameter and the product ID. The CMS DB includes a situation data module storing the situation data, an analysis data module storing the analysis data and the encoding algorithm, and a decode module decoding the encoded parameter. A terminal outputs a script expressing the situation data received from the forming part, inputs the situation matching to the situation data, and receives the encoded parameter and the product ID from the **combining part** .

Abstract (Basic): WO-200111502 A2

NOVELTY - The user selects elements for displaying in two different web pages, in accordance with specific choices which are stored in memory. The combined web page is created based on the two web pages with elements chosen in accordance with stored user's choice.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Computer-implemented server data processing method;
- (2) Computer-implemented client data processing method;
- (3) Combined web page creation apparatus;
- (4) Server; and
- (5) Computer program product for combined web page creation process

USE - For creating a combined web page for computer network.

ADVANTAGE - Avoids navigation through multi-level web sites to reach desired information by creating combined web page.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the data processing elements.

Abstract (Basic): WO 200242863 A2

NOVELTY - Method consists in decomposing encountered **web pages** into **fragments** and searching them recursively for related content. Decomposition is by comparing textual content with predetermined textual patterns, generating a fragment for each textual content pattern that matches, recursively comparing the fragment content with the predetermined patterns and generating the corresponding **fragment**. Results are **combined** by adding, deleting or reorganizing terms in URIs.

DETAILED DESCRIPTION - There are INDEPENDENT CLAIMS for:

- (1) An Internet search computer
- (2) An Internet search program

USE - Method is for Internet searches for e.g. multimedia or streaming media files.

DESCRIPTION OF DRAWING(S) - The figure shows a flow diagram of the Internet search process.

**Abstract (Basic): EP 917071 A2**

NOVELTY - A **web page integrator** (135) is running on the client computer calculates a logical minimum width required to display screen objects, creates a physical markup representation of the **Web** page document with a width at least as wide as the calculated width and scales the document by a factor based on the ratio of logical minimum width to target width.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for methods of converting semantic markup representation of document into physical representation, for creating distinguishing identifier, for retrieving documents linked to initial document and for a computer program product.

USE - Capturing hypertext **web** pages for conventional viewing as portable document format (PDF) files.

ADVANTAGE - Avoids **parts** of **HTML document** being hidden from user, allows HTML; document to passed between applications in a viewer friendly form.

DESCRIPTION OF DRAWING(S) - The drawing is a block diagram of computer system for the **web** page capture.

User computer (100)

ABSTRACT: Longtime programmers will probably recognize some of the hottest issues **surrounding** Web development and **content** management in the year 2000. Version control. Rollback. Bug tracking. Check-in, check-out. These are all techniques that have been used to manage traditional...

... managing Web content. Content management is being extended to include tools for content delivery and personalization, document life-cycle management, Web authoring, and tools that **merge content** with E-business applications. The need for these tools has exploded as companies' **Web sites** have evolved from static brochureware into complex sites containing a broad range of frequently changing content.

ABSTRACT: Adobe Systems' Photoshop image processing software is used to combine product shots of Industrial Strength Eyewear modular sunglasses with photographs of various industrial backgrounds. The program was used by a photographer on assignment for the Seattle ad agency Matthaeus, Donahoe, Halverson. A primary feature of such image-editing programs as Photoshop, Fractal Designs' ColorStudio and SuperMac Technology's PixelPaint Professional is their ability to control the opacity of objects to let backgrounds show through. The photographer wanted to control the color of the glasses and the backgrounds independently while also having the combined photos appear as unified images. Photoshop's color-correction functions were used to give the industrial shots a dark, richly colored look, and a selection of tools and paste controls were used to merge the sunglasses and the backgrounds. The seven steps of the process and the resulting images are shown.

TEXT:

Illustrator Jeff McCord uses Photoshop to let the background shine through transparent sunglass lenses.

One of the most powerful features offered by painting and image-editing programs such as Adobe Photoshop, Fractal Design's ColorStudio, and SuperMac's PixelPaint Professional is the ability to control the opacity of objects so that the background shows through when they're pasted into an image. Jeff McCord, of Free-Lancelot, in Seattle, recently took advantage of that feature to complete a challenging assignment for the Seattle ad agency Matthaeus, Donahoe, Halverson. The agency asked McCord to photo-edit images for a product catalog for a client, Industrial Strength Eyewear (ISE), a producer of modular sunglasses.

The design goal was to combine product shots of the sunglasses with photographs of various industrial backgrounds. Art director Paul Matthaeus wanted to control the color of the glasses and the backgrounds independently, but he also wanted the combined photos to appear as unified images. McCord used Photoshop's color-correction functions to achieve a dark, richly colored look for the industrial shots and then used selection tools and paste controls to merge the sunglasses and the backgrounds. By controlling the opacity of selected areas, he achieved the effect of transparent sunglass lenses.

Seattle photographer Tom Collicott took the original photos, and Dave Patterson, of WIZYWIG, a Seattle service bureau, scanned them at 300 dpi on a Scitex Smart Scanner.

1 Editing the Background

Industrial-background shots such as this diesel-engine control panel are scanned on a Scitex Smart Scanner, after which McCord opens them in Photoshop for editing (left). He uses Photoshop's Arbitrary Map dialog box (on the Image menu) to manipulate the photo's color curve, adding green, darkening, and slightly solarizing the photo. He then uses the magic-wand tool and the Similar command (on the Select menu) to isolate the bright

dial faces. He feathers the selection so the changes blend into the rest of the image and then uses the Hue/Saturation controls to make a "Hulk-green" tone (right).

#### 2 Silhouetting the Sunglasses

Photographs of different-colored sunglasses, shot on glass against neutral backdrops illuminated by overhead and soft-fill lights, are scanned at 300 dpi with the Scitex Smart Scanner. For the time-consuming task of silhouetting the sunglasses, McCord brings in prepress consultant Doug Peltonen, who uses Photoshop's magic-wand and other selection tools to delete the background grays.

#### 3 Pasting the Sunglasses

McCord opens the yellow-sunglasses file in Photoshop and clicks on its white backdrop with the program's magic-wand tool. To avoid selecting fuzzy edges, he chooses zero tolerance and no anti-aliasing. Using Inverse, from the Select menu, he selects everything except the background (the sunglasses, in this case). He copies the sunglasses selection to the Clipboard and then pastes it into the background image.

#### 4 Making the Glasses Transparent

With the pasted sunglasses still active, McCord chooses Paste Controls from the Edit menu and enters 60-percent in the Opacity field. This allows 40-percent of the background to show through both the lenses and the frames.

#### 5 Making the Frames Opaque

To restore the frames to 100-percent opacity while keeping the lenses at 60-percent opacity, McCord pastes a copy of the original glasses file into the background. He positions the opaque copy over the transparent pair and uses the **lasso** tool to **draw around** the newly pasted opaque lenses. Holding down the Command key while he draws subtracts the selected lenses from the glasses until only the solid frames are highlighted.

#### 6 Restoring the Highlights

To exaggerate the highlights on the lenses, McCord pastes the original glasses file into the background image for a third time and positions it as before. Then, with the glasses file still selected, he specifies Lighten Only in the Paste Controls dialog box. This technique pastes only those parts of the opaque glasses that are lighter than the underlying image. With these lighter areas still selected, McCord uses Photoshop's Brightness/Contrast controls to increase the contrast until he achieves the desired white specular reflection on the left lens.

#### 7 Finishing the illustrations

Throughout the ISE catalog, McCord uses the same techniques. For this page, McCord pastes clear lenses onto a blue background. He adds soft drop shadows behind the glasses by creating a mask layer and then using Photoshop's Calculate functions (on the Image menu) to subtract a fuzzy mask from the black plate. The glasses "float" just above the background.

Photoshop Plug-in Integrates Four Innovative, New Tools with Traditional Selection Tools to Provide the Ultimate in Masking Productivity for the Graphics Professional

BURLINGAME, Calif., April 21 /PRNewswire/ -- Chroma Graphics, Inc. today announced MagicMask, a cross-platform masking and selection plug-in for users of Adobe(R) Photoshop(R) and compatible applications. MagicMask brings together four new tools for creating and refining masks and selections, making complex projects quick and easy. Using Chroma Graphics' patented ImageGenetics(TM) technology, MagicMask is the first in an integrated suite of three plug-ins that will improve the daily workflow of graphic designers, digital photographers, and prepress professionals by introducing tools that "see" images and require less guidance from the user.

MagicMask will be demonstrated for the first time at Seybold/NY April 23- 25 at Jacob Javits Convention Center, booth number 1900.

"MagicMask ushers in a new generation of Chroma Graphics products that will radically improve productivity for prepress professionals," said Marc Miller, lead product designer at Chroma Graphics, co-author of The Color Mac book, and seventeen-year veteran of the print industry. "These tools are unbelievably easy. MagicMask introduces high-end prepress masking to the desktop, making precise masks much easier to create. Since images can be so different for each job, MagicMask gives users traditional tools and state-of-the-art, new tools to ensure that they have the best solution for each job."

Delivering innovative, patented edge detection, direct pixel selection, color range, and selective color density masking technology, MagicMask provides users with all the tools necessary to create and refine complex masks and selections. What was once a tedious task can now be done, in many cases, in just one step.

### **MagicMask Represents Second Generation Technology**

MagicMask represents second generation selection and masking technology from Chroma Graphics. Chroma's first product, Chromatica(TM) for MacOS(R) and Windows(R) 95/NT, is currently shipping and continues to be well-received by customers and press, offering easy color range object selection, recoloring, edge blending, and color effects for Photoshop users. With MagicMask, Chroma introduces new technology and sets the stage for a new series of tightly integrated Photoshop and compatible plug-ins that specifically targets the graphics professional.

### **Four New Tools for Masking and Selection**

MagicMask offers four new tools, in addition to traditional tools, for creating and refining masks and selections. The plug-in increases productivity while delivering unprecedented flexibility, precision, and ease-of-use to graphics professionals. MagicMask creates true 8-bit deep masks, based on color and grayscale, and supports all color spaces. This combination of innovative tools makes selections as intuitive as possible, without the need to draw or outline to create precise masks. Additionally, all selections can be saved as 8-bit TIFF files and seamlessly exported back to Photoshop as a quick mask.

MagicMask's easy-to-use interface means that even novice Photoshop users can take advantage of its capabilities, yet it is extremely robust for the professional graphics user. MagicMask includes the:

-- Color Brush Tool -- With just a small brush stroke over an object, it is instantly selected according to the sample color range. The user can

adjust the color range selection with a simple slider, select multiple objects with independent color ranges simultaneously, and perform local or global selections with a contiguous/non-contiguous option. Doubling its power, the color brush also works in "exclude colors" mode, allowing sophisticated selections that consist of multiple "include" and "exclude" color ranges. A "pro" mode gives visual access and control over the specific range of color selected by the brush strokes.

-- Magic Lasso Tool -- When the user **draws** a **lasso** around an object, this tool automatically finds the object edge. Even the most complex, irregularly shaped, multi-colored objects can be "coralled" with a few clicks of this tool.

-- Nudge Tool -- For quick fine-tuning, users can directly manipulate any selection, "nudging" it into place or making broad sweeping changes with equal ease.

-- Density Mask Tool -- Extending the fixed colors of RGB/CMY, this tool lets the user choose any color in the image to create a selective color density mask. The adjustable "reach" lets users mask objects with challenging gradients such as skin tones in one step. The mask moves gradually into the background, avoiding harsh contrasts and allowing smoother gradients. Even multiple ranges can be selected as part of the same mask.

-- Pixel Edit Brush -- The user can perform precise editing with the sweep of a brush.

-- Lasso and Marquee Tools -- MagicMask consolidates traditional selection tools so the user has easy access to all of them within the plug-in.

The diversity of digital images makes flexibility essential. For example, if a user attempts to select one orange in a bowl of oranges with a masking program that relies entirely on color range, the result is the selection of all the oranges. MagicMask's breadth of tools enables the user to select the one most appropriate for the image. In this example, MagicMask's pixel edit and edge detection tools would be most effective in selecting a specific orange quickly and easily. Users can employ one tool or use multiple tools when creating masks or selections.

#### Additional Productivity and Ease of Use Features

The design philosophy underpinning MagicMask is to maximize productivity and ease-of-use. Some of the many features MagicMask includes to this end are:

-- Fully-resizable display area with Zoom and Pan control, to display actual image pixels, not a proxy.

-- Multiple mask display options.

-- Unlimited undo and redo.

-- Reset and invert controls that let users start over or invert a mask

-- Variable brush sizes and shapes.

-- Online help and user-specified preferences.

#### The First in a Suite of Integrated Plug-ins

MagicMask is the first in a suite of three integrated plug-ins. Used separately or in combination, each will minimize the number of steps required to complete image editing tasks. The upcoming EdgeWizard (TM) plug-in will automatically create variable feather edges and other edge effects, either globally or with the precision of a brush tool. The ChromaZone (TM) plug-in will deliver sophisticated recoloring techniques, combining easy one-click recoloring with the complete control demanded by the graphics professional. Since all the new Chroma plug-ins are integrated, the need to switch back and forth between them using the "Filters" menu is eliminated.

#### Availability and Pricing

MagicMask will ship for MacOS, Windows 95 and Windows NT this summer and will be priced at \$99.95, a remarkable value given the unmatched range of features and ease-of-use. Readers can call 1-888-8CHROMA (824-7662) for product information, to buy Chromatica or to pre-order MagicMask. EdgeWizard and ChromaZone will be available by the end of 1997.

#### About Chroma Graphics

Founded in 1995, Chroma Graphics, Inc. is headquartered in Burlingame, California. Chroma was founded on the simple premise that a computer should be able to "see" and manipulate images in much the same way a human does. The mission is to utilize Chroma's patented ImageGenetics technology, which is based on many years of genetic research, to create revolutionary image editing software for graphics professionals. Chroma develops, markets and licenses its multi-platform software.
